¹⁾ For use at: $\leq 1000 \text{ m}$ above sea level

²⁾ Further tolerances may arise in subsequent electronics after position value comparison (contact mfr. of subsequent electronics)

³⁾ Information from Siemens as per the document "Certified encoders with DRIVE-CLiQ Dependencies on SIMOTION / SINUMERIK and SINAMICS Hardware and Software versions" (version: 12/2018)

⁴⁾ The calculation time TIME_MAX_ACTVAL specifies the time after which a data transfer from the encoder to the control can start within the current-regulator clock time.

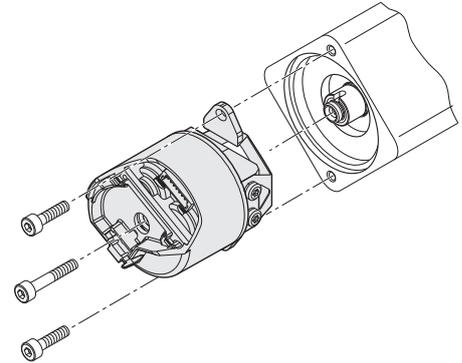

⁵⁾ See *Temperature measurement in motors* in the *Encoders for Servo Drives* brochure.

⁶⁾ At ≥ 2 position requests per revolution

Mounting

The blind hollow shaft of the rotary encoder is seated onto the measured shaft and fastened with a central screw. It is particularly important to ensure that the positive-locking element of the rotary encoder shaft securely engages the corresponding slot in the measured shaft. Mounting on the stator side is performed without a centering collar on a flat surface with two clamping screws. Use screws with material bonding anti-rotation lock (see *Mounting accessories*).

For the customer-side mounting design, the material properties and conditions in accordance with the *General mechanical information* in the *Encoders for Servo Drives* brochure must be complied with. The materials specifications for aluminum and steel apply both to the customer-side shaft and stator.

For the design of the mechanical fault exclusion for the shaft connection, the following maximum torque M_{max} must be taken into account:

$$M_{max} = 1.0 \text{ Nm}$$

The customer's mechanical design must ensure that the maximum torque M_{max} occurring in the application can be transmitted.

Mounting accessories

Screws

Screws (central screw, mounting screws) are not included in delivery and can be ordered separately.

	Screws ¹⁾		Quantity
Central screw for ECN 1123	ISO 4762-M3×22-8.8-MKL	ID 202264-65	10 or 100
Central screw for EQN 1135	ISO 4762-M3×35-8.8-MKL	ID 202264-66	
Fastening screw for flange	ISO 4762-M3×10-8.8-MKL	ID 202264-87	20 or 200

¹⁾ With coating for material bonding anti-rotation lock

Please note the information on screws from HEIDENHAIN in the *Encoders for Servo Drives* brochure, under *Screws with material bonding anti-rotation lock* in the chapter *General mechanical information*.

Mounting aid

To avoid damage to the cable, use the mounting aid to connect and disconnect the cable assembly. The pulling force must be applied only to the connector and not to the wires.

ID 1075573-01

Mounting aid

The mounting aid allows the shaft of the rotary encoder to be turned from the rear of the device, making it easy to find the positive-locking connection between the encoder shaft and the measured shaft.
